PCSCloud: Text embedding Pricing

Effective date of pricing: March 1, 2025

Overview

PCSCloud offers a text and document embedding service to enable semantic search functionalities.
All access to this embedding service is secure and reserved for authorized users only.

All requested embeddings are processed by servers located in France, and are not used for any other purpose.
No text or embedding is stored on these servers.

Embedding service billing

Pricing based on the number of tokens used

Billing is monthly and depends on the number of tokens used.

A token used corresponds to a word or part of a word, depending on the tokenization model used.

All embedding services created during the month are due. Months are billed from the first day.

The table below shows prices according to the number of tokens used per month :

Embedding service	Price (€/month)
Up to 1 billion tokens used	49.90
Per 100 additional million	4.99

All prices are exclusive of taxes and PCSCloud reserves the right to update its prices as of the first of each month.

Implementation fees

To use the embedding service, you need a Cloud account. Opening a Cloud account generates a one-time fee that covers setup costs.

A single Cloud account allows you to create development platforms, operating platforms, telemetry platforms, email platforms, cluster platforms and embedding services.

Therefore, you don't need to create a new Cloud account if you already have one.
The table below shows the fees for setting up a Cloud account (not necessary if you already have an account).

Implementation fees	Price (€)
Opening a Cloud account	9.90

All prices are exclusive of taxes and PCSCloud reserves the right to update its prices as of the first of each month.
