Cloud for PCSoft development projects: Pricing

Effective date of pricing: August 1, 2026

Overview

The Cloud for PCSoft development projects offers development platforms allowing you to virtualize your WINDEV, WEBDEV or WINDEV Mobile projects.

These development platforms allow you to **store and share your WINDEV, WEBDEV and WINDEV Mobile** projects in the Cloud. This means you can access your projects from any computer, at any time, anywhere in the world.

Development platforms also enable you to **to share data from your Control Centers**: Project Management Hub, Quality Control Center, Messaging application.
From the Cloud dashboard, you can manage contributors, groups, requirements, tasks, messages, bugs, suggestions, etc.
Development platforms also allow translators to **access and share WDMSG translation dictionaries**.

Finally, development platforms allow you to save the configuration of your WINDEV, WEBDEV or WINDEV Mobile environment (editor layout, custom menus, custom buttons, last projects opened, recent files, etc.). This means your working environment remains the same, wherever you are.

Access is secure and is reserved to authorized users.

Service description

High-quality, ready-to-use environment

Three services are available on Cloud development platforms:
- **The Source Code Manager (SCM)**, to share your PCSoft projects.
- **The Control Centers**, to centralize your development processes.
- The project configuration storage Center, to find **your working environment** anywhere in the world.

These services are specifically adapted to the Cloud platforms and have been optimized for seamless integration from PCSoft's development environments: WINDEV, WEBDEV and WINDEV Mobile. They are remarkably easy to use.

This enables you to focus on developing and managing your projects without worrying about setup, maintenance and security tasks related to an SCM or Control Center server.

A platform administration interface allows you to create and manage users, user groups, access rights, backups, statistics, etc.

Availability, scalability, security

Development platforms are designed to guarantee high availability, even in the event of hardware failure.

You can add or remove users at any time. The platform automatically adapts to the workload.

A backup option can be enabled to perform a daily backup of your platform (see "Platform backup").

Development platform billing

Pricing based on the number of developers

The initial development platform is intended for 1 developer.
However, you can add developers or translators at any time.

Billing is performed monthly and is based on the number of developers and translators.
Any platform created during the month is billed.
Any developer and/or translator added during the month is billed.

The table below shows prices for the platform according to the number of developers.

Development platform	Price (Euros/month)
Initial platform for one developer (including 10 GB of storage space)	16.90
Additional developer (including 10 GB of storage space per developer)	16.90
Additional translator (including 10 GB of storage space per developer)	16.90

All prices are exclusive of taxes and are subject to change without prior notice.

Storage space billing

Data storage

Each development platform provides you with a storage space. This space is used to store:

- the Source Code Manager (SCM) database, i.e. the resources from your WINDEV, WEBDEV and WINDEV Mobile projects,
- the Control Center database, i.e. data from your schedules, messages, requirements, incidents, environment configurations, etc.

Storage space is billed monthly, based on average daily usage. For example, the cost is the same if you use 30 GB for one day or 1 GB for 30 days. You only pay for the actual allocated space.

The table below shows prices for storage space.

Space used/month (average)	Price (Euros/GB)
10 GB per developer	Included
Beyond 10 GB per developer	0.9

All prices are exclusive of taxes and are subject to change without prior notice.

Platform backup

An automatic backup option can be enabled for the development platform.
This backup is performed daily, and data is kept for 14 days. This gives you 12 daily incremental backups and 2 weekly full backups.

This backup is performed on a physical machine independent from your platform.
Activation of the option and restoration of a backup are available on request to our technical team.

The table below shows prices for the development platform backup option:

Backup/Restore	Price (Euros)
Automatic daily backup	13.99/month/platform saved
Backup restore	59.90

All prices are exclusive of taxes and are subject to change without prior notice.

Data transfer billing

Data transfers correspond to incoming data streams (upload) and outgoing data streams (download).
The sum of data transfers is billed per month.

The table below shows prices for data transfer (download and upload):

Data transfer/month	Price (Euros/GB)
< 100 GB	Included
Beyond	0.07

All prices are exclusive of taxes and are subject to change without prior notice.

Setup and assistance fees

Opening a Cloud account generates a one-time fee that covers setup costs.

A single Cloud account allows you to create development platforms, operating platforms, telemetry platforms and cluster platforms.

Therefore, you don't need to create a new Cloud account if you already have one.

The table below shows prices for setup and assistance services.

Setup / Assistance fees	Price (Euros)
Opening a Cloud account	9.90
New development platform	19.90
Customized assistance	115
Priority assistance	145

All prices are exclusive of taxes and are subject to change without prior notice.

Management fees

Management fees corresponds to 20% of the monthly subscription fee associated with the different options, if any (platform, storage space, data transfer, etc.). These management fees are payable monthly.

All prices are exclusive of taxes and are subject to change without prior notice.
